Overview

Admin Logger is a Magento extension designed to log every changes made on Magento Back office such as product, category, taxes creation, changes or deletion.

Each action is logged with data and user.

Installation

Upload files

Activate the magento caches in « system », « cache management », then unzip the archive and upload it into your remote web site.

Once all files are uploaded, you have to refresh both magento and index caches

Once caches are refreshed, log out and login from admin panel (to reset permissions)

Settings

All settings are available from menu System > Configuration > Advanced > Admin Logger

Notice: if you have "Access denied" message, you have to logout and login from admin panel to reset permissions

General

Settings	Description
Enable	Yes / no
Prune	If activate prune the logs from the specifiated date
Prune delay	Number of day before prune
Force initial data	Allow maximum informations in logs for more details
Enable logs	Yes / no

How to use

To view logs, select menu **"System > Admin logger"**

Admin Logger Prune logs Clear logs
